

Auto Shop Application

Group-6

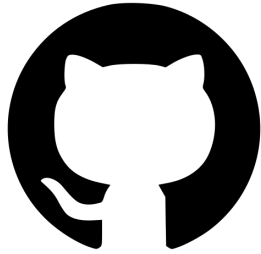

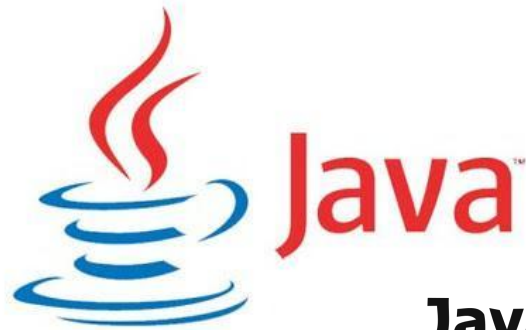

Roderick Cayabyab, Jason Husted, Victor Galbraith,
and Nick Feldman

July 22, 2024

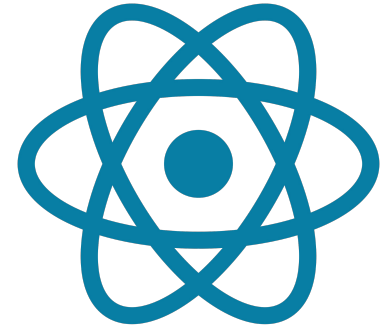

Project Overview

- The Auto Shop Application manages and tracks orders for an auto shop, allowing users to perform various tasks based on their roles:
 - Admin, Seller, or Customer.
- Key functionalities include managing car parts inventory, processing orders, and maintaining customer and vehicle information.

Technologies

JavaScript

User Stories & Demo

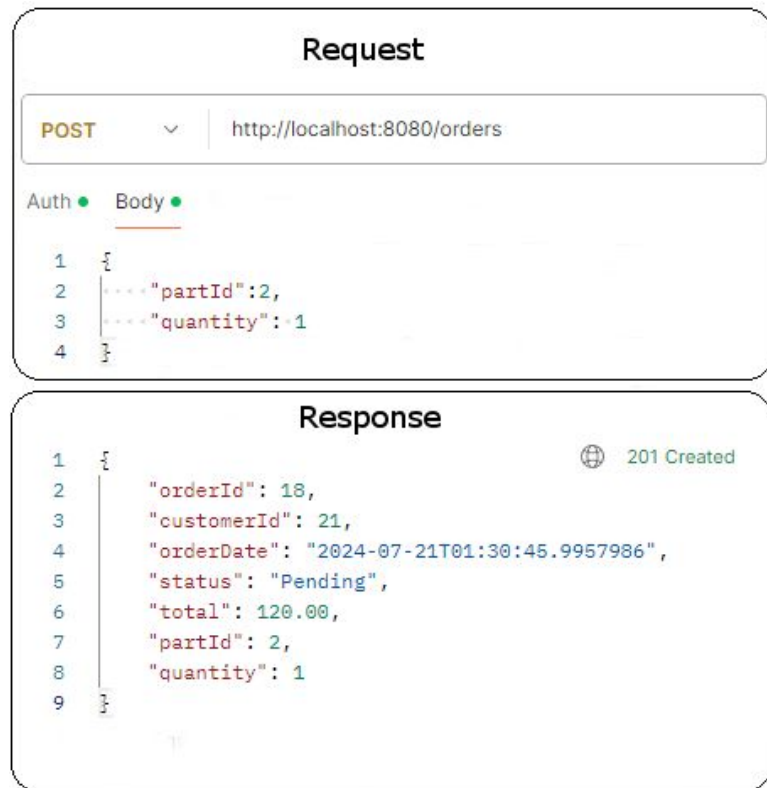

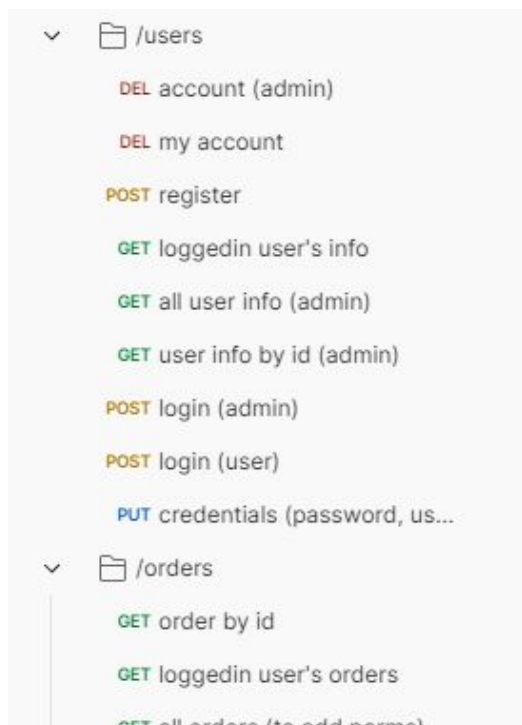

- Users:
 - Customers
 - Sellers
 - Admins

- Demo: Brief overview of the application's functionality.

Testing

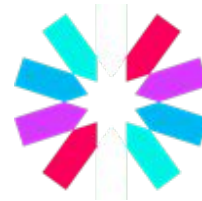

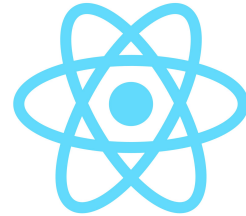

- Postman

Challenges

Working with new frameworks, technologies

- User Stories → How do we make it work?
 - How to keep code consistent between everyone?
 - Dependencies, classes, readability

JWT

Handoff

- Handoff/ Future Work:
 - Expanding functionality to implement remaining User Stories.
 - Enhancing application with expanded functionality.

Wrap up

- Questions?
